IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Applicant	: Dipan Patel	Art Unit	: 2454
Patent No.	: 8,015,267	Examiner	: James T. Baron
Issue Date	: September 6, 2011	Conf. No.	: 6357
Serial No.	: 10/561,428		
Filed	: March 26, 2007		
Title	: METHOD AND SYSTEM FOR SELECTIVELY DISTRIBUTING DATA TO A SET OF NETWORK DEVICES		

Attn.: Certificate of Corrections Branch
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

TRANSMITTAL OF REQUEST FOR CERTIFICATE OF CORRECTION

Cursor Applicant hereby requests that a certificate of correction be issued for the above patent in accordance with the attached request.

One or more of the errors sought to be corrected were made by applicant. The fees in the amount of $100 are being paid concurrently herewith.

Please apply any other necessary charges or credits to Deposit Account 06- 1050, referencing the above attorney docket number.

Respectfully submitted,

Date: October 17, 2011   /Marie Smyth, Reg. No. 65,404/
                                  Marie Smyth

PATENT NO.   : 8,015,267

APPLICATION NO.: 10/561,428

ISSUE DATE: September 6, 2011

INVENTOR(S)   : Dipan Patel

It is certified that an error appears or errors appear in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

Column 10, Line 8, cancel the text beginning with "1. A method comprising:" to and ending with "hardware identifier." in column 10, line 31, and insert the following claim:

1.   A method comprising:
       receiving, by a set top box, update code streamed to the set top box by a server on a predetermined channel;
       generating, by the set top box, a trigger to check whether the set top box is to invoke the update code that is streamed to the set top box by the server on the predetermined channel;
       receiving, by the set top box in response to the trigger, an m-bit update flag included in the update code, wherein the m-bit flag does not uniquely identify the set top box;
       accessing, by the set top box in response to the trigger, an n-bit unique hardware identifier assigned to the set top box;
       comparing, within the set top box, the m-bit update flag to a predetermined portion of the n-bit unique hardware identifier, wherein n is greater than m;
       determining, based on comparing the m-bit update flag to the predetermined portion of the n-bit unique hardware identifier, that the m-bit update flag matches the predetermined portion of the n-bit unique hardware identifier; and
       selectively invoking, by the set top box, the update code based on determining that the m-bit update flag matches the predetermined portion of the n-bit unique hardware identifier.

Column 11, Line 10, cancel the text beginning with "10. The method of claim 9, further comprising:" to and ending with "nel." in column 11, line 21, and insert the following claim:

10.   The method of claim 9, further comprising:
       determining, by the server, a second quantity of set top boxes to update from the plurality of set top boxes based on the quantity of users that have provided feedback for the update code;
       selecting, by the server, a value, o, based on the second quantity of set top boxes to update and the quantity, n, where the value, o, is less than the quantity, n;
       generating, by the server, an o-bit update flag;
       including, by the server, the o-bit update flag in update code; and
       streaming, by the server, the update code, including the o-bit update flag, to the plurality of set top boxes on the predetermined channel.

Column 11, Line 45, in Claim 11, after "identifier;" insert --and--.

Column 11, Line 48, in Claim 11, delete "m-bit" and insert --n-bit--, therefor.

Column 12, Line 31, in Claim 19, after "wherein" insert --the--.

Column 12, Line 49, cancel the text beginning with "21. A non-transitory computer storage medium encoded" to and ending with "hardware identifier." in column 13, line 6, and insert the following claim:

21.   A non-transitory computer storage medium encoded with a computer program, the program comprising instructions that when executed by a set top box causes the set top box to:

    receive update code streamed to the set top box by a server on a predetermined channel;

    generate a trigger to check whether the set top box is to invoke the update code that is streamed to the set top box by a server on a predetermined channel;

    receive, in response to the trigger, an m-bit update flag included in the update code, wherein the m-bit flag does not uniquely identify the set top box;

    access, in response to the trigger, an n-bit unique hardware identifier assigned to the set top box;

    compare the m-bit update flag to a predetermined portion of the n-bit unique hardware identifier, wherein n is greater than m;

    determine based on comparing the m-bit update flag to the predetermined portion of the n-bit unique hardware identifier, that the m-bit update flag matches the predetermined portion of the n-bit unique hardware identifier; and

    selectively invoke, by the set top box, the update code based on determining that the m-bit update flag matches the predetermined portion of the n-bit unique hardware identifier.

Column 14, Line 34, in Claim 38, after "greater than" insert --the--.

Column 14, Line 46, in Claim 40, after "greater than" insert --the--.

Column 14, Line 60, in Claim 42, after "greater than" insert --the--.
